# Transitioning an Enterprise to Reliable Alarm Connectivity

## PROBLEM

Nutra Tech was **monitoring over 40 sites with Sensaphones connected to U.S. Cellular 3G dialers.**

With the 3G network officially shut down, traditional alarm systems like Sensaphone and Agri-Alert that rely on 3G are unable to trigger alarms, leaving users in the dark.

## SOLUTION

After learning more about **BarnTalk**, Nutra Tech's Vice President Andy Kosky says its **built-in connectivity and cost-effectiveness** made the most sense for their operation.

---

“Switching to BarnTalk was a no-brainer for us, especially with the live capability to check the app.”

# How Nutra Tech Stemmed Losses from a Major Water Leak

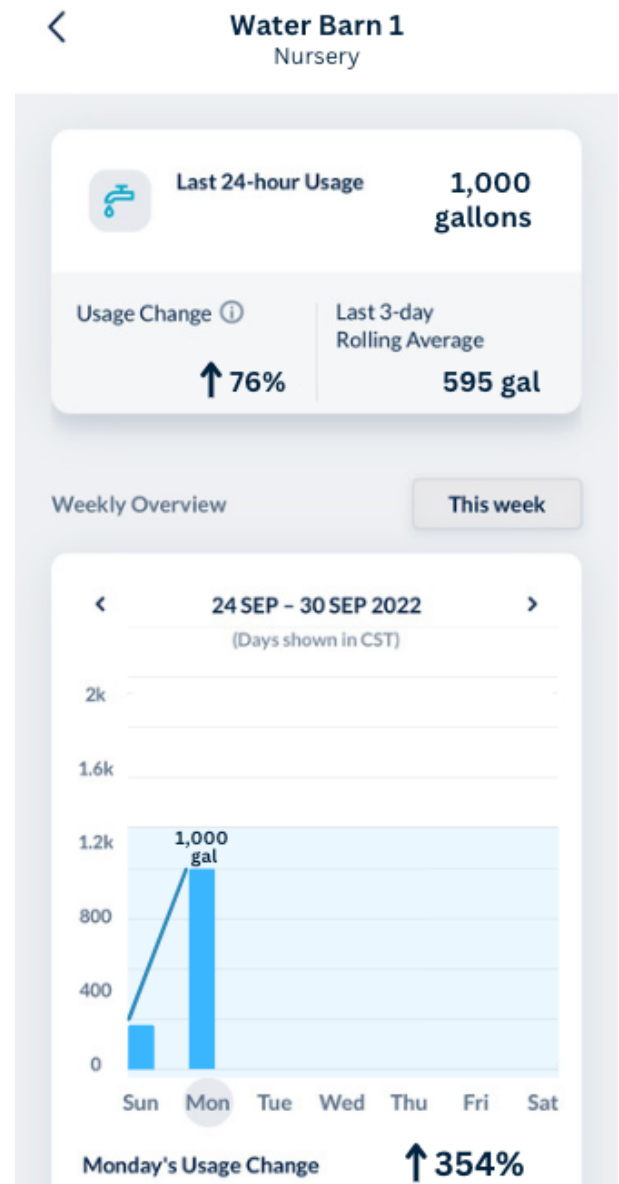

Using an alarm system with built-in connectivity is **allowing Nutra Tech to monitor their sites 24/7** from any location, compared to having to call into their old Sensaphones for current alarm thresholds and a report on barn conditions.

— “**With BarnTalk, we have real-time, real-world access to data.**”

Just two days after getting water meters set up in a nursery, Nutra Tech caught a **354% increase in water usage caused by a burst pipe** before it led to a major loss.

“By Friday, we caught two rooms where the water hose to the feeder blew off.

We went from **220 gallons** used in 24 hours in one room **all the way up to 1,000.**”

By transitioning to a next generation alarm system with built-in connectivity, **Nutra Tech is outpacing the rapid changes to rural broadband** and keeping their production on the leading-edge.
